SALES & CUSTOMER ANALYTICS — DATA REPORT

Smarter Insights. Stronger Connections. Better Performance.

A data-driven analysis of 30,000 orders across FY2024-FY2026, built to mirror and extend the executive Sales & Customer Analytics dashboard.

₹36.7 Cr	30,000	8,998	₹12,236
Total Sales	Total Orders	Total Customers	Avg. Order Value

Report Date: 19 August 2026

- 6. Key Findings & Recommendations

1. Executive Summary & Key Metrics

This report analyzes 30,000 Decathlon orders placed between January 2024 and August 2026, covering 8,998 unique customers across India. It reproduces the headline metrics shown on the executive Sales & Customer Analytics dashboard and goes further with a structured set of business questions answered directly from the underlying transaction data.

TOTAL SALES	TOTAL ORDERS	TOTAL CUSTOMERS	AVG. ORDER VALUE
₹36.7 Cr	30,000	8,998	₹12,236
▲ 40.8%	▲ 40.1%	▲ 13.5%	▲ 0.5%

Growth figures shown on the dashboard represent 2024 → 2025/2026 all-period selection deltas.

Additional headline figures (from full dataset analysis):

Metric	Value
Total Profit	₹11.27 Cr
Overall Profit Margin	30.7% of Final Sales
Customer Retention (repeat buyers)	64.6%
Return Rate	8.05% of orders
Average Customer Rating	3.00 / 5
Gender Split (Sales)	50.1% Male · 49.9% Female

2. Year-on-Year Performance

Sales and order volume grew from FY2024 to FY2025, before FY2026 shows a partial-year figure (data available only through August 2026) rather than a true decline.

Figure: Year-on-year Sales (₹ Cr, bars) and Orders (line)

Year	Total Sales	Orders	Customers	Avg. Order Value	Profit
2024	₹12.97 Cr	10,624	5,934	₹12,207	₹4.01 Cr
2025	₹13.11 Cr	10,790	5,942	₹12,147	₹4.03 Cr
2026*	₹10.63 Cr	8,586	5,339	₹12,383	₹3.24 Cr

*2026 figures are partial-year (Jan-Aug 2026) — not a full 12-month comparison.

3. Sales & Product Analysis — Business Questions

Q1. Which sport category generates the most revenue, and does it match the dashboard's Top 5?

Yes. **Cycling** is the clear leader with **₹8.06 Cr** in sales from 3,139 orders — more than double the next-highest category. It is followed by Outdoor (₹4.15 Cr), Running (₹3.51 Cr), Gym (₹3.35 Cr) and Hiking (₹3.30 Cr), which together match the "Top 5 Sports Type" panel on the dashboard (Cycling, Gym, Hiking, Outdoor, Running). Cricket, Badminton, Football, Yoga and Swimming trail behind, each contributing ₹2.5–3.3 Cr.

Q2. How is revenue distributed across product categories, and which categories are most profitable?

Cycling products alone account for **22%** of total sales and **₹2.55 Cr** of profit — the single largest contributor on both dimensions. Camping (11.3%), Running (9.6%), Fitness (9.1%) and Trekking (9.0%) round out the next tier. Profit share tracks sales share closely (each category converts to roughly 30% margin), so there is no category that is disproportionately more or less profitable — Cycling's scale, not its margin, drives its outsized profit contribution.

Sales Share by Product Category

Q3. Is there seasonality in sales, and which months perform best?

Sales peak in **May (₹3.54 Cr)** and stay strong through Q1–Q2 (Jan–Jun), which together contribute ₹19.5 Cr — 53% of total sales. Activity cools in the July–September window (monsoon season in India), with September the lowest month at ₹2.74 Cr, before a modest festive-season recovery is not clearly visible in aggregate Q4 numbers. By quarter: Q2 (₹9.84 Cr) > Q1 (₹9.68 Cr) > Q4 (₹8.71 Cr) > Q3 (₹8.48 Cr).

Monthly Sales Trend (2024-2026 Combined)

Q4. Which promotional campaigns drive the most sales?

Winter Sports Fest is the top-performing campaign (₹5.57 Cr, 4,578 orders), followed closely by "Back To Sports" (₹5.40 Cr) and "Diwali Mega Sale" (₹5.39 Cr). The seven tracked campaigns are fairly evenly spread — the gap between the strongest and weakest campaign (Independence Day Offer, ₹4.89 Cr) is only about 12%, suggesting campaigns are contributing broadly rather than one single promotion carrying the year.

Q5. How does discounting affect profitability per order?

There is a clear downward relationship: average profit per order falls from **≈₹4,176** at 0% discount to **≈₹2,046** at the steepest 40% discount tier — roughly a 51% reduction in per-order profit. Deals in the 0–10% range preserve healthy margins, while discounts beyond 25% erode profit meaningfully. This suggests promotional depth should be capped or targeted (e.g., to clear aging inventory) rather than used broadly.

4. Customer Analysis — Business Questions

Q6. What is the customer retention rate, and how many customers are repeat buyers?

Overall retention stands at **64.6%**, matching the dashboard’s "Customer Retention Rate" panel. At the customer level, **5,811 of 8,998 customers (64.6%)** placed more than one order — confirming that roughly two-thirds of the customer base is repeat business rather than one-time buyers, a strong signal of brand loyalty.

Q7. How is revenue split between male and female customers, and does this match the dashboard?

The split is almost perfectly even — **Female customers** generated ₹18.31 Cr (49.9%) from 7,028 customers, while **Male customers** generated ₹18.40 Cr (50.1%) from 6,870 customers — matching the dashboard’s 50% / 50% "Sales by Gender" donut. Male customers are slightly fewer in number but spend marginally more per head.

Q8. Which customer segments and membership tiers contribute the most revenue?

Returning customers are the backbone of revenue, contributing ₹16.46 Cr (44.8%) versus ₹11.15 Cr for Loyal and ₹9.10 Cr for New customers. By membership tier, **Basic** members drive the majority of sales (₹22.33 Cr, 60.8%) simply due to volume (7,503 customers), while Premium (₹10.71 Cr) and Elite (₹3.67 Cr) tiers show progressively higher average spend per customer despite smaller bases — Elite members average roughly ₹14,750 in lifetime spend versus ₹14,270 for Basic.

Q9. Which age group is most valuable, and how should marketing prioritize?

Adults (the largest defined age band) dominate with ₹25.64 Cr in sales from 7,940 customers — about 70% of total revenue. Seniors contribute ₹6.45 Cr and Teens ₹4.62 Cr. Adults should remain the primary marketing focus, but Teens represent the smallest, most under-penetrated segment and may offer the best long-term growth opportunity if engaged early.

Q10. Which cities and states are the strongest markets?

Noida leads all cities at ₹3.20 Cr, narrowly ahead of Chennai (₹3.17 Cr), Ahmedabad (₹3.16 Cr), Jaipur (₹3.16 Cr) and Mumbai (₹3.15 Cr) — the top 5 cities are within 2% of each other, indicating a well-balanced national footprint rather than dependence on one metro. At the state level, **Maharashtra** is the standout, at ₹6.08 Cr (roughly double any other single state) since it aggregates sales from multiple cities including Mumbai and Pune.

5. Operations, Channel & Fulfilment — Business Questions

Q11. Which sales channel performs best — Website, Store, or Mobile App?

The three channels are almost perfectly balanced: **Website** (₹12.30 Cr, 10,090 orders), **Store** (₹12.23 Cr, 10,014 orders) and **Mobile App** (₹12.18 Cr, 9,896 orders) each contribute roughly one-third of total sales. This indicates Decathlon’s omnichannel strategy is working — no single channel is being neglected or over-relied upon.

Q12. What is the order return rate, and what are customers returning products for?

8.05% of the 30,000 orders (2,416 orders) were returned. The leading reasons are fairly evenly spread: "Wrong Item Delivered" (550 cases, 22.8%), "Changed Mind" (546, 22.6%), "Size Issue" (502, 20.8%), "Defective Product" (412, 17.1%) and "Late Delivery" (406, 16.8%). Because fulfilment-related reasons (wrong item + late delivery) account for nearly 40% of all returns, tightening warehouse pick-accuracy and delivery-time reliability is the single highest-leverage fix available.

Q13. Which payment method is most popular, and does payment method affect order value?

Wallet payments lead with ₹9.54 Cr across 7,800 orders, ahead of Cash (₹9.47 Cr), UPI (₹9.15 Cr) and Card (₹8.55 Cr). All four methods are within 11% of each other in total value, confirming customers have genuinely diversified payment preferences rather than gravitating to one dominant method — digital wallets and UPI combined now represent over 50% of transaction value.

Q14. Does delivery type (Home Delivery vs. Pickup) affect customer satisfaction?

Average customer rating is nearly identical between **Pickup** (3.00/5, instant, 20,160 orders) and **Home Delivery** (2.99/5, averaging 4.03 days, 9,840 orders). This suggests delivery speed alone is not currently the dominant driver of customer satisfaction — the flat ~3.0 average rating across the board points to a broader satisfaction gap worth investigating beyond fulfilment method (e.g., product quality, expectations-setting, or a compressed/limited rating scale in this dataset).

Q15. Are sales concentrated in a few stores, or evenly spread across the network?

Sales are led by five flagship stores — **Decathlon Mumbai** (₹7.62 Cr), Gurgaon (₹7.40 Cr), Delhi (₹7.39 Cr), Noida (₹7.29 Cr) and Bengaluru (₹7.01 Cr) — each doing 5,900–6,100 orders. The tight spread (within 8% of each other) again shows a well-distributed network rather than dependence on a single flagship location.

6. Key Findings & Recommendations

Key Findings

- Cycling is the single most important category — it drives 22% of sales and profit and should anchor inventory planning and marketing spend.
- Retention is strong (64.6% of customers are repeat buyers), but the average customer rating of ~3.0/5 suggests a satisfaction ceiling that is capping further loyalty gains.
- Discounts beyond ~25% materially erode per-order profit (roughly halved at 40% discount) — deep discounting should be used surgically, not broadly.
- Fulfilment issues (wrong item, late delivery) drive nearly 40% of all returns — this is an operational fix, not a demand problem.
- Channel mix (Website / Store / Mobile App) and payment mix (Wallet / Cash / UPI / Card) are both well balanced — no channel or payment risk concentration.
- FY2026 figures are partial-year; like-for-like comparison requires annualizing before concluding on a growth slowdown.

Recommendations

- Double down on Cycling with expanded SKU range and bundled accessories (helmets, water bottles) to lift basket size on the already highest-performing category.
- Investigate the flat ~3.0/5 rating — run a targeted CSAT survey to separate product quality issues from delivery/fulfilment issues.
- Cap blanket discounts at ~15–20% and reserve deeper markdowns for clearance/aging stock only.
- Prioritize warehouse pick-accuracy and last-mile SLA improvements to directly cut the two leading return reasons (wrong item, late delivery).
- Launch a Teen-focused acquisition campaign — it is the smallest segment today and the most under-tapped growth pocket relative to Adults and Seniors.
- Re-engage the 35% of customers who have not returned for a second order with a targeted win-back offer, given how much value repeat customers already contribute.

Methodology: All figures are computed directly from the 30,000-row transaction dataset (Decathlon_Synthetic_Data_30000.xlsx, "DATA" sheet) using Sales_Amount/Final_Amount, Profit, Order_ID, Customer_ID and related fields, cross-checked against the values shown on the executive dashboard image.
